

PALAMINA CORP.

MANAGEMENT DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS FOR THE NINE MONTH PERIOD ENDED SEPTEMBER 30, 2018

This Management Discussion and Analysis ("MD&A") reviews the financial condition and results of operations of Palamina Corp. ("Palamina" or the "Company") for the nine month period ended September 30, 2018. The MD&A was prepared as of November 27, 2018 and should be read in conjunction with the unaudited interim consolidated financial statements for the nine month periods ended September 30, 2018 and 2017, including the notes thereto and the audited consolidated financial statements for the years ended December 31, 2017 and 2016 and the notes thereto. All figures are in Canadian dollars unless stated otherwise. Additional information relevant to the Companies activities, including the Company's audited consolidated financial statements can be found on SEDAR at www.sedar.com.

All statements, other than of historical fact included herein, including without limitation, statements regarding potential mineralization, reserves and exploration results and future plans and objectives of the Company are forward looking statements and involve various risks and uncertainties, which are detailed in the Section "Risk Factors" of this MD&A. There can be no assurance that such statements will prove to be accurate, and actual results and future events could differ materially from those anticipated in such statements.

OVERVIEW

Palamina Corp. ("Palamina" or the "Company") is an exploration stage company focused on the exploration for economic mineral deposits in Peru through its wholly owned subsidiary in Peru Palamina SAC ("Palamina Peru"), and in Mexico through its wholly owned subsidiary, Palamina S.A. de C.V. ("Palamina Mexico"). Palamina was incorporated on April 23, 2015 under the *Business Corporations Act* (Ontario). The Company's head office is located at 145 King Street West, Suite 2870 Toronto, ON M5H 1J8. Palamina is a reporting issuer pursuant to the securities laws of Ontario, British Columbia, Alberta, and Saskatchewan and is listed on the TSX Venture Exchange under the symbol PA.

Management's strategy for building Palamina into a profitable resource company and maximizing shareholder value is to acquire and explore properties with the potential to host significant economic deposits within prolific mining districts in Peru. The Company explores primarily for gold and silver, with the objective of enhancing the value of its properties either by direct exploration or through joint ventures to third parties. This strategy diversifies the business risks inherent in developing a single property.

Going Concern Uncertainty

The Company is at an early stage of development and, as is common with many exploration companies, it relies on financings to fund its exploration and acquisition activities. The Company had an excess of current assets over current liabilities of \$352,144 at September 30, 2018; had not yet achieved profitable operations; had accumulated losses of \$5,411,057 at September 30, 2018; and expects to incur further losses in the development of its business. Management believes that Palamina has adequate cash resources to fund its operations over the next twelve months. However, additional financing is required in order to conduct its planned work programs on its mineral properties, meet its ongoing levels of corporate overhead and discharge its liabilities as they come due. There can be no certainty as to the ability of the Company to raise sufficient additional financing in order to continue to operate.

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

PROPERTY PORTFOLIO

Qualified Persons

Mr. Donald Mc Iver, M.Sc. Exploration and Economic Geology, a Fellow of the Australian Institute of Mining and Metallurgy (FAusIMM), as well as the Society of Economic Geologists (FSEG), Vice President of Exploration for Palamina Corp. and a qualified person as defined by NI 43-101, has reviewed the contents of the exploration overview section of this MD&A regarding exploration advances on the Palamina S.A.C. (“Palamina Peru”) mining concessions and applications. Mr. Mc Iver is not considered independent due to his position as an officer of the Company. In addition to reviewing this report, Mr. Mc Iver is responsible for management and supervision of Palamina Peru’s exploration programs in Peru.

Peru Properties

Mining Concession Applications and Titles

On January 2, 2017, Palamina Corp’s 100% owned Peruvian subsidiary, Palamina Peru, secured the application mining rights to 27 mining concession applications within the Department of Puno in southeast Peru as well as two mining concession applications in the Department of Ica along the Peruvian coast south of Lima, for a total of 29 mining concession applications covering a total 24,000 hectares.

In the fourth quarter of 2017, Palamina Peru submitted an additional 23 mining concession applications for a total of 54 applications covering some 39,300 hectares. At December 31, 2017 Palamina Peru had yet to receive title to any of its mining concession applications.

In 2017, the granting of title for mining concession applications in Peru were delayed due to a number of factors as set out below:

- On April 30, 2016, Law 30428 was adopted facilitating the introduction of a new UTM coordinate system in Peru (“WGS84”). This new law resulted in complications associated with overlapping UTM coordinates between the historical PSAD56 coordinate system and the new WGS84 coordinate system,
- The mining concession application process in Puno was suspended from February 6, 2017 to October 31, 2017, due to the introduction of a formal process to legalize the status of certain artisanal miners,
- Palamina Peru’s mining concession application areas are also subject to partial reductions and/or fractioning which occur when two or more groups apply for the same area simultaneously. When this happens, the mining concession application is subject to auction between interested parties which results in delay, and
- The Peruvian Ministry of Energy and Mines (MEM) had suspended issuance of titles in the department of Puno while it contested a disingenuous November 14, 2016 decision by the Supreme Court of Puno. The November 14, 2016 decision allowed surface rights owners the ability to block the issuance of title until such time an agreement is reached between the mining concession applicant and the surface rights owners to explore and exploit the mining concession application areas. In December of 2017 the MEM elected to begin processing applications within the Department of Puno that sit outside the community in which the surface rights were affected by the Supreme Court judgement.

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

The majority of mining concession application rights secured by Palamina are within the department of Puno. In contrast to 2017, the process for issuance of title during 2018 appears to be resuming a more normal time frame for processing applications outside the disputed area. Since the beginning of 2018 applications in Puno are being granted title as all the required processing steps are completed.

In June and August of 2018, additional mining rights were made available for staking by the Peruvian government and Palamina completed supplementary staking and participated in several property auctions to hold title and mining application rights to 74,500 hectares in the Puno Orogenic Gold Belt (“POGB”). The current outcome of staking and receiving title is that Palamina has received title to 36 mining concessions in the POGB totalling 26,700 hectares where 47,800 hectares remain under application. Palamina holds additional Peruvian application mining rights outside of the POGB totaling 7,800 hectares. Combined, Palamina Peru holds application and mining rights to 114 pediments covering a total of 82,300 hectares.

Changes to the Peruvian mining law in 2018

Environmental Permitting: Under the previous mining laws, prior to obtaining title and without environmental permits in place, Palamina Peru could only carry out limited exploration reconnaissance programs on its applied and titled ground. During 2017, whilst completing the necessary steps to obtain title, Palamina Peru completed limited preliminary reconnaissance-style geological evaluation on all of its property groupings.

New mining laws (Supreme Decree N° 042-2017-EM), brought into force in Peru on December 22, 2017, present a number of positive developments for operators in the mining and exploration industry. Under article 10 of the new mining law, exploration and prospecting activities using instruments or equipment that can be transported without causing greater alteration than that caused by the ordinary traffic of people and vehicles (such as with equipment relating to geological, geophysical, geotechnical and geochemical studies; topographic surveys; collection of small amounts of rock samples and surface minerals, etc.) no longer require an environmental permit (certification) before starting the activity. Such constructive changes facilitate a significant advantage for expediting exploration advances in preparation for exploratory drilling.

Drill Permitting: Previously a Category I declaration of environmental impact study (DIA) allowed up to 20 “pre-located” and non-relocatable exploration drill holes; recent modification of this law for the same category will now facilitate up to 40 relocatable drilling platforms (unlimited number of drill holes).

Focus on Puno Orogenic Gold Belt

The Puno Orogenic Gold Belt (POGB) is a highly prospective sediment-hosted auriferous belt which follows the Andean trend and measures approximately 175 kilometres NW-SE by 75 kilometres NE-SW. The gold belt is bordered by Bolivia to the east and the Madre de Dios region to the north, and contains numerous orogenic gold showings. The POGB is one of the world’s least formally explored orogenic gold belts.

The POGB occurs within a larger 3,400 km long belt of orogenic deposits which extends from northern Argentina, northwards through Bolivia and the Puno belt and up to the Pataz region located in northern Peru. Orogenic gold mineralization in the Puno region occurs in a variety of mostly structurally-controlled styles, in general association with regional shear zone structures but also frequently along bedding-parallel “interbedding” planes. Palamina is targeting continuous, tabular zones of multiple quartz veining-hosted orogenic gold mineralization within fine-grained, sheared, weakly metamorphosed, sedimentary rocks. Tabular zones may occur as discrete, stacked, bedding-parallel horizons within the

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

host rock. Gold mineralization consists of native gold in continuous, distinctive “packages” of fine-grained sediment-hosted quartz veins, veinlets and micro-veinlets and metallurgical recoveries are typically high. Orogenic gold deposits are known to extend to vertical depths greater than 1,000 m (important local examples include Ollachea & La Rinconada). Under the articles of the latest mining laws, hard-rock artisanal mining methods do not have a legal limit relating to the depth to which the miners might mine, however are restricted to the number of metric tonnes (25 Tm) which can be extracted on any given day.

The orogenic gold belt of Puno hosts more than 100 known hard-rock gold-mineralized occurrences and over 50 mines are actively undergoing exploitation in an artisanal, small-scale manner. Little to no resource drilling and/or systematic exploration activity occurs, neither along strike extension or at depth within these areas of the POGB. Palamina Peru believes the POGB has considerable potential to contain a compelling number of additional yet undiscovered orogenic gold deposits. Extended erosion of these gold-bearing structures (by both water and abrasive glacial forces), are thought to be the source of extensive alluvial gold deposits located in the low-lying Madre de Dios region to the north.

Over recent years in the POGB, there has been a significant up-grading of road access (example: Pacific-Atlantic interoceanic highway) and power infrastructure (example: 206 MW San Gaban hydro-electric facility - third power plant under construction). It is Palamina Peru’s belief that these developments will lead to and assist the development of new gold discoveries in the coming years. With this in mind, Palamina Peru has assembled a core Peru-based geological team having a combined 35 years’ experience in the POGB. Palamina Peru’s five gold projects in the POGB occur in proximity to important known gold occurrences and generally involve grassroots exploration over geologically highly prospective areas. All have previously been to some extent “ground-truthed” by artisanal, small-scale and informal miners who are generally limited to mining gold from the top 50–100 metres below surface. Mineralized orogenic systems can extend down dip to over 1,000 metres in depth.

Puno Orogenic Gold Belt (POGB) Applications

In January of 2017, Palamina Peru applied for five separate project areas in known gold mining districts; the Gaban, Cori, Coasa, Orco and Sandia gold projects. Since January of 2017, all five project areas have been visited and prioritized based on an analysis of their access infrastructure and geological potential. On October 31, 2017, a sixth project area named Bendi, was staked.

After completing initial visits, the Orco and Sandia gold projects were combined into one project, the Orco Project. Of the resulting five district-scale gold projects and on the basis of information available, Palamina Peru has prioritized the Coasa, Gaban and Bendi gold projects and completed numerous geological campaigns on each.

Heliborne Geophysical Survey

Orogenic gold mineralization in the POGB frequently has an association with pyrrhotite (a sulphide which has magnetic properties), disseminated within swarms of quartz veins and veinlets generally restricted to discrete, continuous packages in regional shear zone structures hosted by fine-grained sedimentary units. In early-August 2018 New-Sense Geophysics Limited commenced a >3,000 line kilometer heliborne magnetic/radiometric geophysical survey over Palamina’s Coasa, Gaban and Cori gold projects in the POGB. Palamina is the first company to conduct airborne geophysics over these areas, the results of which will assist Palamina to advance its understanding of the structures in the POGB. Although yet to receive final processed results, Palamina believes the outcome of the heliborne survey will help focus follow up ground exploration by identifying the most prospective sectors of

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

regional structures as delineated by the survey, thereby accelerating the pace of discovery and possible drill testing.

The three scheduled heliborne geophysical surveys were flown at a constant terrain clearance altitude of approximately 40 metres measuring magnetic and radiometric data. Survey flight lines totaled approximately 3,083 line-kilometres and were flown as a general rule perpendicular to the dominant structural trends and, depending on Palamina objectives, on parallel line-spacing's of 125 metre, 250 metre and 500 metre intervals. Magnetic and radiometric data were downloaded at frequent intervals facilitating prompt target identification as raw survey data became available.

Purchase of POGB database:

In October of 2018, Palamina purchased a sampling database from Pembroke Copper Corp. relating to regional reconnaissance exploration programs carried out in the POGB from 2007 to 2009. A total of 2,068 samples consisting of 1,127 rocks samples, 439 Bleg samples and 502 Stream Sediment samples were included in the database. The data acquired has been integrated with Palamina's geochemical database to better understand mineralization in the POGB.

A summary of work completed to date on all Palamina project areas follows.

Coasa Gold Project

At the Coasa Gold Project, Palamina Peru has secured the mining rights to 14 titled concessions totaling 12,600 hectares with 6 additional pediments under application covering a total 4,600 hectares for a total of 17,200 hectares. The Coasa Gold Project is located near the town of Usicayos (centrally located along the western periphery of the POGB), where initial staking was carried out to investigate a geological setting interpreted to be similar in nature to that of the Ollachea orogenic gold deposit located some 65 km to the northwest. The Coasa concessions extend east and west of the town of Usicayos at elevations ranging from 2,800 to 4,700 metres. Due to the elevation, rock exposure on the pediments is generally excellent as the properties sit predominantly above the tree line.

Members of Palamina's geological exploration team formed part of the discovery team at the Ollachea orogenic gold deposits which occur along a structurally deformed east-west trending regional shear structure. Similarly, 75 km southeast of Coasa, the estimated multi-million-ounce orogenic gold occurrence at La Rinconada also features a significant east-west inflection zone. Midway between Ollachea and La Rinconada at roughly similar elevations, the Coasa Gold Project also lies along an appreciably deformed comparable east-west trending jog zone.

On September 12, 2018, Palamina reported the discovery of 4 visible gold zones at Veta that the surface high grade gold mineralization of the Veta zone currently covers an open-ended 800 by 500 metre area. Selective rock-chip sampling in the Veta Zone has returned up to 620 g/t (19.9 oz/t) gold. Continuous channel sampling has confirmed the presence of important gold mineralization within quartz vein structures as well as in the slate and siltstone host rocks and has returned values up to 1.8 metres of 19.6 g/t gold.

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

Select channel and rock chip sampling* above 3.5 g/t gold from field sampling are as follows:

SAMPLE #	LOCATION ZONE	SAMPLE TYPE	WIDTH METRES	GOLD g/t
2696	Veta	Rock-Chip*	0.15	620
2542	Veta	Continuous Channel	0.9	103
1324	Veta	Rock-Chip*	0.1	39.2
2577	Veta	Continuous Channel	1.8	19.6
2605	Veta	Continuous Channel	0.9	11.1
1299	Veta	Rock-Chip*	0.1	9.6
1342	Veta	Rock-Chip* Channel	0.5	8.4
1276**	Veta	Rock-Chip*	0.1	7.7
1330	Veta	Rock-Chip*	0.1	5.0
1297	Veta	Rock-Chip*	0.1	5.0
1329	Veta	Rock-Chip* Channel	1.0	4.6
1323	Veta	Rock-Chip*	0.1	4.5
1360	Veta	Rock-Chip* Channel	7.0	4.2
2601	Veta	Continuous Channel	1.8	4.2
2599	Veta	Continuous Channel	0.9	3.9

*Rock-chip samples are selective by nature and thus not fully representative of the mineralization hosted on Veta.

**Field duplicate results for sample # 1276 returned 15.7 g/t Au

The 800 by 500 metre Veta anomaly is located within a larger 1.8 x 0.5 km prospective area of structurally prepared host rocks including folded and tectonically displaced shear zones which accommodate lesser folded fault-shear structures incorporating both sub-parallel as well as transversally disposed swarms of gray-white quartz veins, veinlets and micro-veinlets. These, in turn, are hosted by sub-vertically aligned fine-grained sedimentary sequences of slates and siltstones belonging to the Ananea Formation.

Up to three suites of differently oriented packages of mineralized quartz veins, veinlets and micro-veinlets have been recognized, the most dominant developed along a WNW trend. Coincident mineralizing controls established at Veta, amongst others, include i) fine-grained host lithologies acknowledged as prospective; ii) prospective regional- and local-scale structures; iii) nearby intrusive bodies resulting in a favourable low-grade metamorphic finish; iv) a complex structural setting conducive to a variety of multi-gold remobilization events; v) low-percentages (<4%) of sulphide content (py>aspy>pyrr>others); etc. An important finding is that visible observation in conjunction with analytical results confirm negligible occurrence at Veta of bismuth, antimony, copper and other common “metallurgical impurities” which can occur in association with native orogenic “free-gold” mineralization. This information supports projected satisfactory metallurgical recovery rates consistent with the POGB.

A preliminary interpretation to account for the source of orogenic gold mineralizing fluids at Veta is furnished by a meaningful coincidence of a hypabyssal intrusive plug wedged along the northern flank of a series of sub-vertical structures, both features having the Veta Anomaly as their common foci. On a macro-scale the structures are intimately associated with a broad series of localized secondary shears diverging off the nearby regional Phusca shear zone. Notably, and in contrast to prevailing EW to NW

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

trending shearing and foliation on the project, the Veta Anomaly appears to be associated with a NE trending structural inflection or “jog” zone into which mineralizing solutions have been introduced.

Of the 744 geochemical samples which have been collected at the Veta Anomaly since its discovery; 569 have been as continuous channel samples varying from 0.5 to 5.0 metres true width across mineralized structures hosted by intermittent “in-situ” outcrops located on scree-covered slopes throughout the Veta discovery zone. Overall 57% of exploration channel and rock-chip sampling results returned anomalous gold grades (> 0.1 g/t gold), 12% resulted in gold contents > 1 g/t gold, 4% > 3 g/t gold and 1.5% > 10 g/t gold. Four visible native-gold-hosting structures have been reported.

In the build-up to trenching and diamond drilling, future planned exploration activities are designed to confirm the frequency and density of mineralized structures and will include systematic channel sampling of the broad mineralized zones identified on surface to date. Soil sampling will be considered over areas without rock exposure, and possible ground geophysical studies will be considered as partial follow-up to the results of the recent $> 3,000$ line-kilometre heliborne magnetic/ radiometric survey as conducted over the Coasa, Gaban and Cori Projects.

The above information, coupled with the confirmed coincidence of several established mineralizing controls pertinent to orogenic gold deposits occurring within the POGB, provides a sound grounding for future drill testing of the Veta Anomaly. To this end social and environmental permitting as well as drill permitting are underway whilst a NI43-101 technical report is approaching completion.

Palamina Peru field crews have completed a total of nine geological reconnaissance, mapping and geochemical sampling campaigns on the Coasa Gold Project or 200 days on-the-ground. Aside from Veta (744 rock-chip and channel samples on the Veta discovery alone), four other highly prospective geochemically anomalous areas have additionally been identified. These are intimately associated with the northern extension of the structure controlling gold mineralization on the 1.0 Moz indicated resource (from 1.03 Moz inferred), Crucero gold project (located 4.5 km south of Palamina Peru’s Coasa 9 concession), acquired by GoldMining Inc. from Lupaka Gold Corp (see GoldMining press release dated November 21, 2017).

At the Phusca target, located some 5 km southeast of Veta, anomalous gold values and strong pathfinder geochemistry results have been obtained from prospecting activities. The open-ended Phusca anomaly extends over some 2 kilometres of strike and hosts several geological features characteristic of individual orogenic gold deposits located in the gold belt. A further four weakly anomalous areas have been identified and the Company continues to prioritize its opportunities to facilitate follow-up activities on these potentially important geologically and geochemically prospective areas.

A newly discovered anomalous area, the Cayos gold zone, is located 1.5 kilometres south of the Veta gold zone. Recently reported results include a total of 6 rock samples consisting of 2 composites from small informal mining adits, 2 continuous channel and 2 selective rock-chip samples taken over a 200 by 300 metre area. Selective rock chip sample #2645 returned negligible gold content, the remaining 5 samples returned as follows:

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

SAMPLE #	LOCATION	SAMPLE TYPE	WEIGHT / METRES	GOLD g/t
2637	Cayos	Composite	2.5 kg	16.5
2638	Cayos	Composite	1.4 kg	9.8
2639	Cayos	Channel	3.00	30.5
2640	Cayos	Channel	1.50	2.7
2644	Cayos	Rock-Chip*	0.17	2.9

**Selective rock-chip samples are not considered fully representative of the gold mineralization occurring on the project*

The 3 metres of 30.5 g/t gold intersection from Cayos represents Palamina's best channel sample to date at Coasa. Processed heli-borne geophysical study results are expected to assist in obtaining a better general understanding of the structures at Coasa and to determine more accurately the structural relationship between the mineralized Cayos and Veta Zones.

The Veta and Cayos gold zones have both returned significant gold grades from quartz vein arrays and channel sampling has also confirmed significant gold mineralization within the slate and siltstone host rocks on both. Palamina Peru continues to expand the size of the open-ended Veta gold mineralization which it believes is associated with shear zones which have an intimate relationship with the Coasa East-West trending structural jog zone.

In preparation for the combined processing of structural data together with results generated from the recently completed heliborne magnetic geophysical surveys, Palamina is focusing on structural aspects of the geological mineralizing controls at Coasa thereby generating an initial field assessment of principal structural controls on the project. Dr. Tony Starling, a specialized structural consultant, has been contracted to provide an independent structural report to assist towards developing an in-depth understanding of structural drill targets as well as the generation of additional exploration follow-up targets. Palamina will conduct one further geological campaign in early December 2018 at which time Dr. Starling will visit the Coasa gold project. Results from Dr. Starling's recommendations will be used to optimize drill targets. Drilling at Coasa is expected to be carried out in 2019.

Bendi Gold Project

At the Bendi Gold Project, Palamina Peru has secured the mining rights to 4 titled concessions totaling 3,400 hectares with 20 additional pediments under application covering a total 12,300 hectares for a total 15,700 hectares.

The Bendi Gold Project is located northeast of the Coasa Gold Project where staking has been based on Palamina's understanding of prospective district-scale geological features in the Benditani Mine district and proximity associations to historical and current operating small-scale orogenic gold mines in the area. The Benditani mining district dates back to Pre-Inca times. More than 10 small-scale mining operations are currently in production and there is evidence for over 20 orogenic gold mineralized occurrences in the district. Aside from hard-rock mining activities, alluvial gold-mining also takes place in the nearby Inambari River and its tributaries.

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

Palamina's exploration efforts to date at Bendi have focused on 2 highly prospective sub-parallel district-scale structures as identified by Palamina's field teams: 1) The Carol structure which is a >15 km long NW-SE trending shear zone developed in close association with the core of an anticlinal feature which transects the southwestern sector of the Bendi concessions along with a gold anomalous area, the Carol Anomaly, which has been unveiled south-west of the third party small Huacalcota producing mine where Palamina reports subordinate gold production and; 2) The Mantos structure which is a >7 km long thrust-related shear-zone trending sub-parallel to a shear structure hosting the Benditani gold mine along which Palamina reports chip samples returning 25.4 and 9.9 g/t gold at the Mantos Gold Anomaly.

The Carol Anomaly is an open-ended 2.5 km long by up to 30-metre-wide gold anomaly associated with the above-mentioned > 15 km long NW-SE trending anticlinal feature which transects the southwestern sector of the Bendi Gold Project. Some 1.5 km of the principal mineralized target is located over the eastern limb of the anticline and occurs as brecciated orogenic quartz veins and tectonically fragmented and foliated host rocks. Fine-grained Ordovician to Devonian-aged sediments host this anomalous zone (in such environments anticlinal features can provide optimum 'traps' for mineralizing fluids).

Mineralization in the brecciated quartz veins occurs as disseminated sulphides with >10% FeO in the matrix of this prospective gold-anomalous 'breccia'. Recent channel sampling from a brecciated quartz vein outcrop occurring as a part of a swarm of brecciated orogenic quartz veins located south-west and on strike from the modest third party Huacalcota producing mine, returned:

SAMPLE #	LOCATION	SAMPLE TYPE	METRES	GOLD g/t	SILVER g/t
2176	Carol	Channel	1.8	13.4	234
2215	Carol	Channel	0.9	5.5	-
2132	Carol	Channel	1	0.6	33
2173	Carol	Channel	1.5	0.51	-

The Mantos Anomaly is an open-ended 150 m long x 50 m wide gold anomaly associated with a > 7 km long, Andean-trending compressive shear-zone that results in the siltstones and sandstones of the older Sandia Formation locally unconformably overlying the slates and siltstones of the younger Ananea Formation. Hercynian-aged tectonic compressive-deformation events resulted in NW-SE trending shear-zones, thrust faults, and synclinal and anticlinal folding with minor incidence of NE-SW trending faults, which in turn also result in additional deformation of the orogenic gold host rocks.

The principal mineralized target at Mantos is associated with the western limb of a large anticlinal structure and appears to occur as a discrete package, or 'manto', hosting narrow mineralized discontinuous quartz veins and veinlets generally oriented sub-parallel to the bedding of the fine-grained sediments, but occasionally becoming polydirectional in nature and transecting across bedding boundaries. Some 68% of a total of 69 chip samples resulted in anomalous to importantly elevated Au/As values with the two highest gold assays returning 25.4 and 9.9 g/t gold.

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

Select channel and rock chip sampling* above and equal to 2.0 g/t gold returned:

SAMPLE #	LOCATION	SAMPLE TYPE	METRES	GOLD g/t
1870	Mantos	Rock-Chip*	0.20	25.4
2444	Mantos	Rock-Chip*	0.03	15.3
1401	Mantos	Rock-Chip*	0.05	9.9
1425	Mantos	Channel	5.0	6.3
2465	Mantos	Rock-Chip*	0.04	5.3
1402	Mantos	Rock-Chip*	0.02	3.8
2437	Mantos	Rock-Chip*	0.05	2.4
1453	Mantos	Channel	1.0	2.0
2404	Mantos	Channel	1.0	2.0

*Rock-chip samples are selective by nature and thus not considered fully representative of the mineralization hosted on Mantos.

Follow up geochemical rock-chip and channel sampling along the Carol and Mantos structures is planned to further evaluate the possibilities and extent of the precious metal mineralization along strike to the NW and SE. Bendi has never been drill tested.

Gaban Gold Project

At the Gaban Gold Project, Palamina Peru has secured the mining rights to 9 titled concessions with 19 additional pediments under application covering a total of 20,300 hectares.

The Gaban mining concession applications traverse the town of San Gaban which, at an elevation of 550 meters above sea level, is located on the new Interoceanic highway connecting the Pacific and Atlantic Oceans. Local power is provided by the nearby 206 MW San Gaban hydroelectric facility. In addition, two new bridges have been constructed by the Peruvian government across the San Gaban River; the bridges provide year-round access to the project.

This sector of the POGB sits at the apex of the San Gaban and Inambari rivers, feed from which contributes to the 700 square km's of alluvial gold deposits being mined from the "Mother of God" region in the Amazon jungle. Alluvial gold mining on Gaban is intermittently conducted within the property by 10 sets of artisanal miners who extract coarse alluvial gold from the Yanamayo river. On the basis of field observations, Palamina Peru believes the Gaban property hosts a local source for this alluvial gold, thus preliminary geochemical sampling programs were designed to locate the source of the gold. Geochemical stream sediment sampling (at -60 mesh or 0.250 mm) has returned gold values up to 4.9 g/t in the Yanamayo river. Subsequent follow-up rock-chip sampling bordering the drainage system has identified anomalous gold and important coincidental geochemical pathfinder element relationships.

In January 2018, Palamina Peru announced the acquisition of 100% of the mining rights to two contiguous mining concessions covering 1,000 hectares. By acquiring 100% of the mining rights to the "Minera San Gaban" and "Aurífera San Gaban" concessions, Palamina has secured the mining rights to 85% of the catchment area around the Yanamayo river bound on all sides by four mountain ridges where geochemical stream sediment and rock sampling results would suggest proximity to an orogenic gold source. Palamina Peru paid a total \$US 17,500 on signing of 100% transfer of the mining rights to the 300 hectare Minera San Gaban and the 700 hectare Aurífera San Gaban claims. A further \$US 17,500 was paid once title to the mining rights had been registered in the name of Palamina Peru for a total payment of \$US 35,000. Palamina Peru granted a 1% Net Smelter Return per property whereby Palamina Peru retains the right to purchase one or both of the 1% NSR royalties for US \$330,000 per 1% NSR royalty per property.

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

A total of five field campaigns of up to 20 days each conducting geological reconnaissance mapping, geochemical stream sediment sampling (83 samples), and rock outcrop sampling (183 samples) have taken place on the densely vegetated project. Exploration campaigns at times included as many as three small crews operating under tough field conditions. Recent sampling from a shear zone located on the acquired “Aurifera” concession making up part of the Yanamayo watershed returned:

SAMPLE #	LOCATION	SAMPLE TYPE	METRES	GOLD g/t
3286	Aurifera	Channel	0.15	6.6
3284	Aurifera	Rock-Chip	1	1.34

To date Palamina has located five outcropping shear zones hosting quartz veins and veinlets in the mountain ridges surrounding the Yanamayo river. Palamina is targeting the shear zones as the hard rock source of the alluvial gold mineralization. Recent sampling campaigns continue to increase Palamina’s understanding of the structures and geological reconnaissance results are demonstrating, in line with Palamina’s appreciation of what is required in this belt for economic orogenic gold mineralization to take place, that principal and coincident mineralogical, lithological and structural controls are present. The Gaban Project additionally hosts at least two intrusive events, one of which is mineralized. Up to three quartz vein/veinlet-sulphide mineralizing events have been recognized with associated structural deformation evident in both sedimentary sequences as well as mineralized intrusive bodies.

Exploration campaigns beyond 2018 will focus on the field advancement of anomalous gold zones and enhancing geochemical cover with the ultimate objective to identify prospective areas for future exploration diamond drilling. Processed results from the recent approximately 1,000 line-kilometres heliborne geophysical survey will provide Palamina Peru the first modern regional airborne dataset over an orogenic corridor which is currently the focus of both informal placer and hard rock gold mining activity. Through jungle cover, the results of the airborne magnetic survey will be key in locating extensions to structural shear zones hosting the projected source to this gold mineralization. The survey results will also serve to better understand the structural orientations and anatomy of the 5 shear zones located to date. Further sampling is planned along the shear zone within the Aurifera concession to determine the extent of the identified in-situ gold mineralization. Gaban has never been drill tested.

Cori Gold Project

At the Cori Gold Project, Palamina Peru has secured the mining rights to 4 titled concessions with 19 additional pediments under application covering a total of 16,600 hectares.

In October of 2018 Palamina completed a geophysical heliborne magnetic survey at 500 line spacings over the Cori project area. Flight-lines were selected to detect possible extensions and sub-parallel structural features related to a known 3 km long NW-SE gold-mineralized trend on the southwest side of the Corimayo mountains. Over 1,200 informal miners are mining native orogenic gold from quartz veins in at least 7 separate mining camps within the trend. Palamina has staked available strike extensions of this structure in both directions as well as the down-dip extensions on the north side of the Corimayo mountains. Limited geological reconnaissance has been carried out.

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

Orco Gold Project

At the Orco Gold Project, Palamina Peru has secured the mining rights to 5 titled concessions with 5 additional pediments under application covering a total of 4,700 hectares.

Tectonized and structurally deformed areas hosting NW-SE trending regional thrust faults and NE-SW trending shears are present at Orco. Weak mineralization occurs in the form of quartz veins hosting iron oxides and disseminated sulphides within fault and shear zones. One shear zone over a 10m width hosting deformed quartz veinlets, returned significantly anomalous gold values up to 0.26 g/t Au. Palamina has adopted a buy and hold strategy at Orco while it advances its other projects in the POGB.

Ica Iron Oxide Copper-Gold Project

At the Ica iron oxide copper-gold (I.O.C.G.) Project, two mining concession applications covering 2,000 hectares were claimed in January 2017 and a further two concession applications covering 1,300 hectares were staked in April of 2018. Ica is located within the coastal I.O.C.G. belt of southern Peru (the Tinka project area). A substantial portion of these application areas are subject to auction in November of 2018. Palamina plans to bid on the application areas subject to auction but there is no guarantee it will receive these.

Lagunas Silver Polymetallic Project

At the Lagunas Silver Polymetallic Project, two mining concession applications covering 1,700 hectares were submitted on October 31, 2017. The Lagunas Project is located west of the town of Puno and was acquired to investigate the Ag-Cu (Pb-Zn) potential of the area. Nearby polymetallic mines include the Santa Bárbara, Santa Lucía and Tacaza mines.

Pampa & Eden Gold Copper Projects

In 2017 Palamina commissioned a report to investigate the gold copper potential of the southern coastal batholith located along the south coast from Lima, Peru. In early 2018 site visits were carried out on target areas generated from the report pursuant to which three mining concession applications covering 2,800 hectares were staked on May 2, 2018. The Pampa Gold Project area covers 2,000 hectares and was acquired to cover the interpreted southeastern extension of the Calpa Mine gold-copper mineralized corridor while the Eden Copper Project covers 800 hectares and was acquired to evaluate immediate extensions to the Paraiso Project (0.5MTm @ 2.93% Cu), polymetallic structures.

Mexican Properties

Palamina Corp. maintains a presence in Mexico but is primarily focusing its exploration efforts in Peru. Palamina is seeking a partner to advance its Santuario property in Mexico.

El Santuario Property

The El Santuario property is comprised of one mining concession (“El Santuario”) that is 100%-owned by Palamina Mexico. The concession covers 1,372 hectares and is in the Cardonal district in Hidalgo State in central Mexico. The property is host to numerous historic gold prospects as well as widespread weakly anomalous values of lead, zinc, silver and manganese in altered limestone. In 2012, geologic mapping and sampling was completed with a view to identifying drilling targets. A limited ground magnetic program was also completed along the contact between the sedimentary rocks and a rhyolite porphyry/flow dome complex. A total of 438 additional rock samples were collected and 98.4 line-kilometers of ground magnetics covering approximately 1,215 hectares were completed during the 2012 program.

Two primary target deposit types were identified during the 2012 program: gold in fractures and quartz veinlets hosted by the rhyolite porphyry/flow dome complex and/or adjacent sedimentary rocks and lead-

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

zinc-silver polymetallic replacement deposits hosted by Cretaceous carbonate rocks along the contact with the rhyolite porphyry. Gold mineralization consists of millimeter-scale quartz-iron oxide veining hosted by the rhyolite porphyry. Gold values in the San Clemente area range from below detection limit up to 10.3 grams per tonne (“g/t”). Visible gold has been reported from panning during sampling conducted by the Mexican geological survey in the San Clemente area.

The potential for lead-zinc-silver polymetallic replacement mineralization is reflected by a large area of marblization in carbonate rocks accompanied by local concentrations of jasperoids and limonite, and sericitic and silicic alteration in the rhyolite porphyry. The area is characterized by weak but widespread areas of lead and zinc with sporadic weakly anomalous values of silver and manganese.

In the first quarter of 2016, Palamina Mexico completed a sampling program on the El Santuario Property. Eighty-one (81) rock samples were collected from the San Clemente gold target and the La Presa polymetallic replacement lead-zinc-silver target. Sampling of the San Clemente gold target was intended to better understand the structural controls of the gold mineralization. Twenty-two (22) samples were collected from several prominent structural trends. Sampling targeted well-defined structures of various orientations, as opposed to broader sample intervals which often contain more than one structure, with the objective of understanding which structural orientations are mineralized. All but one of the 22 samples contained detectible gold with 12 of the 22 containing greater than 0.50 grams per tonne gold and four samples containing more than 1.00 grams per tonne gold.

Sampling in the La Presa polymetallic replacement lead-zinc-silver area was intended to investigate a strong northwest-trending fault system along the contact between Cretaceous sedimentary rocks and the rhyolite porphyry. Fifty-nine (59) chip-channel samples were collected from this zone, which measures more than 100 metres in width. The best interval is anomalous in gold and arsenic averaging 0.029 grams per tonne gold (29 ppb gold) over 10 m sampled width, with a maximum value of 0.050 grams per tonne gold (50 ppb gold), and 2,323 ppm arsenic with a maximum of 4,060 ppm arsenic. No further work is planned for the La Presa area at this time.

In July of 2016 Palamina Mexico submitted applications to drop the SANT concession and reduce the size of the El Santuario concession. Palamina Mexico’s application to drop the SANT concession was approved on February 7th, 2017 and the new title for the reduced El Santuario concession was issued on February 14th, 2017. The resulting land position, consisting of the El Santuario concession, is now 1,372 hectares.

In February of 2018 a consultant to Palamina Mexico conducted a property tour on the Santuario project for a third party interested in possibly advancing the project. An NI 43-101 is being completed on Palamina’s Coasa Gold Project in Peru as continued depressed silver prices make it difficult to justify further expenditures on the El Santuario property. Palamina is considering dropping the El Santuario property in order to focus in Peru.

Gavilán Property

On March 13, 2017 Palamina Mexico submitted an application to drop the Gavilán concession.

Chinipas Property

On March 13, 2017 Palamina Mexico submitted applications to drop the Chinipas and Chinipas 1 concessions.

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

Exploration and Evaluation Expenditures

The exploration and evaluation expenses incurred by Palamina by property and by expenditure classification are summarized as follows:

Nine month period ended September 30,	2018	2017
Peru Properties	\$ 1,291,034	\$ 651,968
El Santuario Property	41,022	41,730
Gavilan Property	-	3,416
Chinipas Property	-	405
Exploration and evaluation expenditures	\$ 1,332,056	\$ 697,519

Nine month period ended September 30,	2018	2017
Regional exploration	\$ 521,887	\$ 407,490
Consulting and professional fees	500,766	258,093
Option payments	35,140	-
Geophysics	244,954	-
Mining concession taxes	29,309	31,936
Exploration and evaluation expenditures	\$ 1,332,056	\$ 697,519

OVERALL PERFORMANCE

	Three Months Ended September 30, 2018	Three Months Ended September 30, 2017	Nine Months Ended September 30, 2018	Nine Months Ended September 30, 2017	Year Ended December 31, 2017	Year Ended December 31 2016
			\$	\$	\$	\$
Exploration and evaluation expenditures	552,902	297,106	1,332,056	697,519	989,795	462,306
Administrative expenses	171,337	120,979	496,700	376,455	535,208	538,388
Share-based payments	-	-	316,000	147,000	176,000	20,000
Interest income	(2,476)	(2,130)	(8,111)	(7,926)	(5,595)	(7,240)
Net loss	721,763	415,955	2,136,645	1,213,048	1,695,408	1,013,454
Loss per common share – basic and diluted	0.02	0.02	0.08	0.05	0.07	0.06

Net loss for the three months ended September 30, 2018 was \$721,763 as compared to a net loss of \$415,955 for the three month period ended September 30, 2017. The \$305,808 increase in net loss is primarily attributable to the following:

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

- Increase of \$255,796 in exploration and evaluation expenditures for the three months ending September 30, 2018 compared to the same period in 2017 which is the result of an increase in exploration expenditures in Peru and a decrease in expenditures in Mexico resulting from the reduction in concession areas. The increase in Peru is primarily the result of an increase in regional exploration programs and the initial costs associated with the airborne geophysics program.
- Increase of \$50,358 in administrative expenses for the three months ending September 30, 2018 compared to the same period in 2017. Administrative expenditures increased between the two periods due to increased investor relations activities.

Net loss for the nine months ended September 30, 2018 was \$2,136,645 as compared to a net loss of \$1,213,048 for the nine month period ended September 30, 2017. The \$923,597 increase in the net loss is primarily attributable to the following:

- Increase of \$634,537 in exploration and evaluation expenditures for the nine months ending September 30, 2018 compared to the same period in 2017 which is the result of an increase in exploration expenditures in Peru and a decrease in expenditures in Mexico resulting from the reduction in concession areas. The increase in Peru is primarily the result of an increase in regional exploration programs and the initial costs associated with the airborne geophysics program.
- Increase of \$120,245 in administrative expenses for the nine months ending September 30, 2018 compared to the same period in 2017. Administrative expenditures increased between the two periods due to increased investor relations activities.
- Increase of \$169,000 in share based payments for the nine month period ending September 30, 2018 compared to the same period in 2017 relating to 950,000 options issued during the nine month period ended September 30, 2018 compared to 910,000 options issued in the prior period.

Net loss for the year ended December 31, 2017 was \$1,695,408 as compared to a net loss of \$1,013,454 for the year ended December 31, 2016. The \$681,954 increase in the net loss is primarily attributable to the following:

- Increase of \$527,489 in exploration and evaluation expenditures for the year ending December 31, 2017 compared to the same period in 2016 which is the result of an increase in expenditures in Peru regarding the assessment of the mining claim application areas and a decrease in expenditures in Mexico resulting from the reduction in concession areas.
- Administrative expenses for the year ending December 31, 2017 compared to the same period in 2016 have remained relatively consistent.
- Increase of \$156,000 in share-based payments for the year ending December 31, 2017 compared to the same period in 2016 relating to 1,130,000 options issued during the year ended December 31, 2017 compared to 150,000 options issued in the prior period. The fluctuations result from the timing associated with the granting and vesting of stock options and the recording of the associated share-based payment expense estimated pursuant to the Black-Scholes valuation model.

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

Summary of Quarterly Results

	Sep 30 2018	Jun 30 2018	Mar 31 2018	Dec 31 2017
	\$	\$	\$	\$
Statement of Loss				
Exploration and evaluation expenditures	552,902	498,714	280,440	292,276
Administrative expenses	171,337	166,842	159,521	158,753
Share-based payments	-	316,000	-	29,000
Interest income	(2,476)	(5,635)	-	2,331
Net loss	721,763	975,921	439,961	482,360
Loss per common share – basic and diluted	0.02	0.03	0.02	0.02

	Sep 30 2017	Jun 30 2017	Mar 31 2017	Dec 31 2016
	\$	\$	\$	\$
Statement of Loss				
Exploration and evaluation expenditures	297,106	192,504	207,909	236,123
Administrative expenses	120,979	134,565	120,911	143,824
Share-based payments	-	-	147,000	20,000
Interest income	(2,130)	(2,969)	(2,827)	(1,219)
Net loss	415,955	324,100	472,993	398,728
Loss per common share – basic and diluted	0.02	0.01	0.02	0.02

- Over the past eight quarters exploration and evaluation expenditures ranged from a high of \$552,902 in the third quarter of 2018 to a low of \$192,504 in the third quarter of 2017. The increase commencing in the third quarter of 2017 relates to the increased exploration activity in Peru. The significant increase in the last two quarters of 2018 relates to the initial costs of the airborne geophysics program.
- Administrative expenses ranged from a low of \$120,911 in the first quarter of 2017 to a high of \$171,337 in the third quarter of 2018. Administrative expenses have fluctuated within the normal range of \$120,000 to \$140,000 per quarter and increased in the most recent three quarters to approximately \$170,000 due to steadily increasing operations in Peru and increased investor relations activities.
- Share-based payment expense, which is a non-cash item, has ranged between a low of \$nil to a high of \$316,000 in the second quarter of 2018. The fluctuations result from the timing associated with the granting and vesting of stock options and the recording of the associated share-based payment expense estimated pursuant to the Black-Scholes valuation model.

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

Financial Position

As at September 30, 2018 the Company had assets of \$533,450 (December 31, 2017 - \$374,767) and an equity position of \$402,309 (December 31, 2017 - \$107,641). Total assets as at September 30, 2018 consisted primarily of cash and cash equivalents of \$455,167 (December 31, 2017 - \$296,805), receivables of \$10,651 (December 31, 2017 - \$9,130) and prepaid expenses of \$17,467 (December 31, 2017 - \$22,766).

LIQUIDITY, CAPITAL RESOURCES AND GOING CONCERN UNCERTAINTY

The Company is at an early stage of development and, as is common with many exploration companies, it relies on financings to fund its exploration and acquisition activities. The Company had an excess of current assets over current liabilities of \$352,144 at September 30, 2018; had not yet achieved profitable operations; had accumulated losses of \$5,411,057 at September 30, 2018; and expects to incur further losses in the development of its business. Management believes that Palamina has adequate cash resources to fund its operations over the next twelve months. However, additional financing is required in order to conduct its planned work programs on its mineral properties, meet its ongoing levels of corporate overhead and discharge its liabilities as they come due. There can be no certainty as to the ability of the Company to raise sufficient additional financing in order to continue to operate.

The Company does not have any long term debt or credit facilities with financial institutions. At this time the Company is not anticipating an operating profit from operations and will rely on the proceeds of the recent financing to fund its short term growth. There is no assurance that future financings will be available when required.

COMMITMENTS AND CONTINGENCIES

Under the terms of the Company's mining concessions, the Company must make periodic tax payments and perform minimum levels of exploration to maintain these concessions in good standing. The failure of the Company to meet these requirements would lead to the forfeiture of the Company's rights to these properties. The minimum expenditures to keep the properties in good standing through December 31, 2018 are approximately \$147,000.

OFF-STATEMENT OF FINANCIAL POSITION ARRANGEMENTS

The Company has no off-statement of financial position arrangements.

RELATED PARTY TRANSACTIONS AND KEY MANAGEMENT

Key management includes the Company's directors, officers and any employees with authority and responsibility for planning, directing and controlling the activities of an entity, directly or indirectly. Compensation awarded to key management includes the following:

Nine months ended September 30,	2018	2017
Short-term employee benefits	\$ 339,000	\$ 327,000
Share based payments – options	206,000	107,000
Total compensation to key management	\$ 545,000	\$ 434,000

At September 30, 2018, included in trade and other payables is \$42,000 (December 31, 2017 - \$142,000) due to these key management personnel. These amounts are due on demand, unsecured and non-interest bearing.

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

DIVIDENDS

The Company has neither declared nor paid any dividends on its Common Shares. The Company intends to retain its earnings, if any, to finance growth and expand its operation and does not anticipate paying any dividends on its Common Shares in the foreseeable future.

OUTSTANDING SHARE DATA

The following table sets forth information concerning the outstanding securities of the Company as at November 27, 2018:

Share Capital	Number of Shares
Balance – December 31, 2016, and 2017	22,574,704
Issued pursuant to Private Placement ⁽ⁱ⁾	7,166,667
Issued pursuant to exercise of stock options ⁽ⁱⁱ⁾	150,000
Balance – September 30, 2018 and November 27, 2018	29,891,371

(i) On February 26, 2018 the Company closed a private placement offering of 7,166,667 units at a purchase price of \$0.30 per unit, for aggregate gross proceeds of \$2,150,000. Each unit consists of one common share and one warrant. Each warrant is exercisable to acquire one common share at a price of \$0.50 until August 26, 2019. The Company has the option to accelerate the expiry date of the warrant provided that if after four months and one day following the closing of the private placement, the closing price of the Common Shares on the TSX Venture Exchange is equal to or greater than \$0.90 for 10 consecutive trading days.

(ii) On March 28, 2018 the Company issued 150,000 common shares pursuant to the exercise of stock options at a price of \$0.06.

Stock Options

On September 15, 2015 the Company adopted a stock option plan (the “Plan”) that provides that the Board of Directors of the Company may grant options to directors, officers, employees and consultants of the Company the option to purchase common shares. The maximum number of common shares reserved for issue under the Plan at any point in time may not exceed 10% of the number of shares issued and outstanding. The purpose of the Plan is to attract, retain and motivate directors, officers, employees, and certain third party service providers by providing them with the opportunity to acquire a proprietary interest in the Company and benefit from its growth. Options granted under the Plan are non-assignable and vest over various terms from the date of grant.

As at September 30, 2018, the Company had 184,137 (December 31, 2017 – 2,470) options available for issuance under the Plan.

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

The continuity of outstanding stock options for the nine month period ended September 30, 2018 and year ended December 31, 2017 is as follows:

	Number of stock options	Weighted average exercise price per share \$
Balance – December 31, 2016	1,275,000	0.12
Granted ^{(i) & (ii)}	1,130,000	0.21
Expired	(150,000)	0.13
Balance – December 31, 2017	2,255,000	0.16
Issued ⁽ⁱⁱⁱ⁾	950,000	0.39
Exercised	(150,000)	0.06
Expired	(250,000)	0.17
Balance – September 30, 2018 and November 27, 2018	2,805,000	0.25

- (i) On January 13, 2017, the Company granted 910,000 options to certain officers, directors and consultants of the Company under its stock option plan. All options are exercisable at \$0.22 per common share. The options granted to officers and directors expire in 5 years and the options granted to consultants expire in 2 years. The resulting fair value of \$147,000 was estimated using the Black-Scholes option pricing model with the following assumptions: expected dividend yield of 0%; expected volatility of 113%; a risk-free interest rate of 0.79% - 1.13% and an expected average life of 2 - 5 years. The options vested immediately.
- (ii) On November 1, 2017, the Company granted 220,000 options to certain officers, directors and consultants of the Company under its stock option plan. All options are exercisable at \$0.17 per common share. The options granted expire in 5 years. The resulting fair value of \$29,000 was estimated using the Black-Scholes option pricing model with the following assumptions: expected dividend yield of 0%; expected volatility of 111%; a risk-free interest rate of 1.65% and an expected average life of 5 years. The options vested immediately.
- (iii) On April 6, 2018, the Company granted 950,000 options to certain officers, directors and consultants of the Company under its stock option plan. All options are exercisable at \$0.39 per common share. The options granted expire in 3 and 5 years and vest immediately.

See note 10, 11 and 12 to the unaudited interim condensed consolidated financial statements for the three and nine month periods ended September 30, 2018 and 2017 for more detailed disclosure of outstanding shares, warrants and options.

CRITICAL ACCOUNTING ESTIMATES

The preparation of the Company's financial statements requires management to make judgements and estimates and form assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and reported amounts of revenues and expenses during the reporting period. Such estimates primarily relate to unsettled transactions and events as at the date of the financial statements. On an ongoing basis, management evaluates its judgements and estimates in relation to assets, liabilities, revenue and expenses. Management uses historical experience and various other factors it believes to be

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

reasonable under the given circumstances as the basis for its judgements and estimates. Actual outcomes may differ from these estimates under different assumptions and conditions. The most significant estimates and judgements relate to the calculation of share based payments and warrants, determination of functional currency, and the recoverability of value-added taxes receivable. Significant estimates and judgments made by management in the preparation of these financial statements are outlined below:

Share-based payment transactions

The Company measures the cost of equity-settled transactions with employees by reference to the fair value of the equity instruments at the date at which they are granted. Estimating fair value for share-based payment transactions requires determining the most appropriate valuation model. This estimate also requires determining the most appropriate inputs to the Black-Scholes valuation model including the expected life of the share option, volatility and dividend yield and making assumptions about them.

Functional Currency

The determination of the Company's functional currency requires analyzing facts that are considered primary factors, and if the result is not conclusive, the secondary factors. The analysis requires the Company to apply significant judgment since primary and secondary factors may be mixed. In determining its functional currency the Company analyzed both the primary and secondary factors, including the currency of the Company's operating costs in Canada, Peru, and Mexico, and sources of equity financing.

Tax Provisions

The Company is subject to income, value added, withholding and other taxes. Significant judgment is required in determining the Company's provisions for taxes. There are many transactions and calculations for which the ultimate tax determination is uncertain during the ordinary course of business. The Company recognizes liabilities for anticipated tax audit issues based on estimates of whether additional taxes will be due. The determination of the Company's income, value added, withholding and other tax liabilities requires interpretation of complex laws and regulations. The Company's interpretation of taxation law as applied to transactions and activities may not coincide with the interpretation of the tax authorities. All tax related filings are subject to government audit and potential reassessment subsequent to the financial statement reporting period. Where the final tax outcome of these matters is different from the amounts that were initially recorded, such differences will impact the tax related accruals and deferred income tax provisions in the period in which such determination is made. Value-added taxes receivable are stated after evaluation as to their collectability and an appropriate allowance for doubtful accounts is provided where considered necessary. The determination of the appropriate allowance for doubtful accounts requires the application of significant judgment with respect to the collectability of the amounts outstanding and is based on historical experience.

ADOPTION OF NEW AND REVISED STANDARDS AND INTERPRETATIONS

Adoption of New Standards

The Company has adopted the following new standards, along with any consequential amendments, effective January 1, 2018. These changes were made in accordance with the applicable transitional provisions.

IFRS 9 Financial Instruments ("IFRS 9") – In July 2014, the IASB issued the final version of IFRS 9 Financial Instruments, bringing together the classification and measurement, impairment and hedge accounting phases of the IASB's project to replace IAS 39 Financial Instruments: Recognition and Measurement. IFRS 9's key changes include but are not limited to eliminating the previous IAS 39

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

categories for financial assets of held to maturity, loans and receivables, and available for sale and (ii) replacing IAS 39's incurred loss model with the expected credit loss model in evaluating certain financial assets for impairment. In implementing IFRS 9, the Company updated the financial instrument classifications within its accounting policy as follows:

	IAS 39	IFR 9
Cash & Cash Equivalents	Fair Value through profit or loss	Fair Value through profit or loss
Receivables	Loans and receivables, measured at amortized cost	Amortized cost
Trade and other payables	Financial liabilities at amortized cost	Financial liabilities at amortized cost

There was no material impact on the Company's condensed consolidated interim financial statements upon adoption of this standard.

CAPITAL MANAGEMENT

The Company manages its capital with the following objectives:

- To ensure sufficient financial flexibility to achieve the ongoing business objectives including funding of future growth opportunities, and pursuit of accretive acquisitions; and
- To maximize shareholder return through enhancing the share value.

The Company monitors its capital structure and makes adjustments according to market conditions in an effort to meet its objectives given the current outlook of the business and the industry in general. The Company may manage its capital structure by issuing new shares, repurchasing outstanding shares, adjusting capital spending, or disposing of assets. The capital structure is reviewed by management and the Board of Directors on an ongoing basis.

The Company considers its capital to be equity, comprising share capital, reserve accounts, accumulated deficit and reserve for foreign currency translation which at September 30, 2018 totaled \$402,309 (December 31, 2017 - \$107,641).

Palamina manages capital through its financial and operational forecasting processes. The Company reviews its working capital and forecasts its future cash flows based on operating and capital expenditures, and other investing and financing activities. The forecast is updated based on activities related to its mineral properties. Selected information is provided to the Board of Directors of the Company. The Company's capital management objectives, policies and processes has remained unchanged during the nine month period ended September 30, 2018. The Company is not subject to any capital requirements imposed by lending institutions or regulatory body, other than the TSX Venture Exchange.

The Company is not subject to any capital requirements imposed by a lending institution or regulatory body, other than of the TSX Venture Exchange ("TSXV") which requires adequate working capital or financial resources of the greater of (i) \$50,000 and (ii) an amount required in order to maintain operations and cover general and administrative expenses for a period of 6 months.

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

FAIR VALUE AND FINANCIAL RISK FACTORS

Fair value of financial instruments

The Company has designated its cash equivalents as FVTPL which are measured at fair value. Fair value of cash equivalents is determined based on transaction value and is categorized as a Level two measurement. Cash is classified for accounting purposes as loans and receivables, which are measured at amortized cost. Trade and other payables are classified for accounting purposes as other financial liabilities, which are measured at amortized cost.

- Level One includes quoted prices (unadjusted) in active markets for identical assets or liabilities.
- Level Two includes inputs that are observable other than quoted prices included in Level One.
- Level Three includes inputs that are not based on observable market data.

September 30, 2018	Level One	Level Two	Level Three
	\$	\$	\$
Cash equivalents	-	250,000	-

December 31, 2017	Level One	Level Two	Level Three
	\$	\$	\$
Cash equivalents	-	-	-

As at September 30, 2018 and December 31, 2017, both the carrying and fair value amounts of the Company's financial instruments are approximately equivalent due to their short term nature.

A summary of the Company's risk exposures as it relates to financial instruments are reflected below:

Credit risk

Credit risk is the risk of loss associated with a counterparty's inability to fulfill its payment obligations. The Company's credit risk is primarily attributable to cash and cash equivalents. Cash and cash equivalents consist of cash on hand and on deposit with reputable financial institutions and management believe the risk of loss is minimal. The Company's maximum exposure to credit risk as at September 30, 2018 is the carrying value of cash and cash equivalents.

Liquidity risk

The Company's approach to managing liquidity risk is to ensure that it will have sufficient liquidity to meet liabilities when due. As at September 30, 2018, the Company had current assets of \$483,285 (December 31, 2017 - \$328,701) including cash and cash equivalents of \$455,167 (December 31, 2017 - \$296,805) to settle current liabilities of \$131,141 (December 31, 2017 - \$267,126) resulting in working capital of \$352,144 (December 31, 2017 - \$61,575 working capital).

Market risk

Market risk is the risk of loss that may arise from changes in market factors such as interest rates, foreign exchange rates and the prices of commodities and equities.

Interest rate risk

The Company has cash and cash equivalents balances and no interest-bearing debt. The Company's current policy is to invest excess cash in short-term guaranteed investment certificates issued by banks. The Company periodically monitors the investments it makes and is satisfied with the credit ratings of its investments. As at September 30, 2018, the Company had cash and cash equivalents of \$455,167 (December 31, 2017 - \$296,805).

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

Foreign currency risk

The Company's exploration activities are conducted in Mexico and Peru. Major purchases and exploration expenditures are transacted in Mexican pesos, Peruvian nuevo soles and US dollars. Administrative expenditures and cash and cash equivalents balances are primarily transacted in Canadian dollars. The Company has exposure to foreign currency risk. The Company mitigates the risk of foreign currency fluctuations by converting Canadian currency to Mexican pesos, Peruvian nuevo soles and US dollars when required to fund expenditures in those currencies.

Price risk

The Company is exposed to price risk with respect to commodity prices. Commodity price risk is defined as the potential adverse impact on earnings and economic value due to commodity price movements and volatilities. The Company closely monitors commodity prices, particularly as they relate to gold, silver, and copper to determine the appropriate course of action to be taken by the Company.

Sensitivity analysis

Based on management's knowledge and experience of the financial markets, the Company believes the following movements are "reasonably possible" over the next 12-month period:

- (i) Interest rate risk is limited to cash and cash equivalents balances, primarily held in Canadian and US dollars in Canada.
- (ii) The Company's subsidiaries hold financial assets and liabilities in US dollars, Mexican pesos, and Peruvian nuevo soles that give rise to foreign exchange risk. If the US dollar rose or fell in relation to the Canadian dollar by 5% with all other variables held constant, net loss for the nine month period ended September 30, 2018 would have been approximately \$5,000 higher/lower. If the Mexican peso rose or fell in relation to the Canadian dollar by 5% with all other variables held constant, accumulated other comprehensive loss for the nine month period ended September 30, 2018 would have been approximately \$600 higher/lower. If the Peruvian nuevo sole rose or fell in relation to the Canadian dollar by 5% with all other variables held constant, accumulated other comprehensive loss for the nine month period ended September 30, 2018 would have been approximately \$700 higher/lower.
- (iii) Commodity price risk could adversely affect the Company. In particular, the Company's future profitability and viability from mineral exploration depends upon the world market price of valuable minerals. Commodity prices have fluctuated significantly in recent years. There is no assurance that, even if commercial quantities of valuable minerals may be produced in the future, a profitable market will exist for them. As of September 30, 2018, the Company is not a producer of minerals. As a result, commodity price risk may affect the completion of future equity transactions such as equity offerings and the exercise of stock options and warrants. This may also affect the Company's liquidity and its ability to meet its ongoing obligations.

OTHER RISK FACTORS

There are a number of risks and uncertainties that may have a material and adverse impact on the future operating and financial performance of Palamina and could cause Palamina's proposed plans, prospects, strategies, events, operating and financial performance and results to differ materially from the estimates described in forward-looking statements and forward-looking information in this MD&A related to Palamina. These include widespread risks associated with any form of business and specific risks associated with Palamina's business and its involvement in the early-stage exploration and development industry. An investment in Palamina Shares, as well as Palamina's prospects, is highly speculative due to the high-risk nature of its business and the early stage of its exploration and development activities, as

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

well as due to the limited assets and cash resources of Palamina. Shareholders of Palamina may lose their entire investment. The risks described below are not the only ones facing Palamina. Additional risks not currently known to Palamina, or that Palamina currently deems immaterial, may also impair Palamina's proposed plans, prospects, strategies, events, business, operations, financial performance and results. If any of the following risks actually occur, Palamina's plans, strategies, events, business, financial performance and condition, results and prospects could be adversely affected.

Exploration, Development and Operating Risks

Mining operations generally involve a high degree of risk. Palamina's operations are subject to all the hazards and risks normally encountered in the exploration, development and production of gold, precious metals and other minerals, including unusual and unexpected geologic formations, seismic activity, rock bursts, cave-ins, flooding and other conditions involved in the drilling and removal of material, any of which could result in damage to, or destruction of, mines and other producing facilities, damage to life or property, environmental damage and possible legal liability. The financing, exploration, development and mining of any of Palamina's exploration properties is furthermore subject to a number of macroeconomic, legal and social factors, including the price of gold, silver and copper, laws and regulations, political conditions, currency fluctuations, the ability to hire and retain qualified people, the inability to obtain suitable adequate machinery, equipment or labour and obtaining necessary services in jurisdictions in which Palamina operates. Unfavourable changes to these and other factors have the potential to negatively affect Palamina's business, plans, prospects, strategies, financial performance and condition and results.

The exploration for and development of mineral deposits is a speculative venture involving significant risks which even a combination of careful evaluation, experience and knowledge may not eliminate or even mitigate. While the discovery of a commercially viable ore body may result in an increase in value for shareholders, few mineral properties which are explored are ultimately developed into producing mines. At present, none of the Company's properties have a known body of bankable commercial ore and the proposed exploration programs are exploratory. There is no certainty that the expenditures made by Palamina towards the exploration and evaluation of mineral deposits on its properties will result in discoveries or production of commercial quantities of gold or other minerals.

Substantial expenditures may be required to locate, evaluate and establish mineral reserves, to develop metallurgical processes and to construct mining and processing facilities at a particular site, and substantial additional financing will be required. It is impossible to ensure that Palamina will be able to secure the necessary financing needed to pursue the exploration or development activities planned by Palamina or that its activities will result in an economically viable or profitable commercial mining operation. The decision as to whether a particular property contains a commercial mineral deposit and should or could be brought into production will depend on the results of exploration programs and/or geological and other studies, and the recommendations of duly qualified engineers and geologists. Several significant factors will be considered, including, but not limited to: (i) the particular attributes of the deposit, such as size, grade, metallurgical characteristics, and proximity to infrastructure; (ii) mineral prices, which are highly cyclical; (iii) government regulations, including regulations relating to prices, taxes, royalties, land tenure, land use, permitting, importing and exporting of minerals and environmental protection; (iv) available working capital and ongoing costs of exploration and development; (v) availability, terms and cost of additional funding; and (vi) local community and landowner opposition to access mineral rights. The exact effect of these factors cannot be accurately predicted, but one or any combination of these factors may result in Palamina not being able to pursue its business plans or strategy or its shareholders not receiving an adequate return on invested capital.

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

Early Stage Status and Nature of Exploration

The terms “Resource(s)” or “Reserve(s)” cannot be used to describe any of the Palamina’s exploration properties due to the early stage of exploration at this time. Any reference to potential quantities and/or grade is conceptual in nature, as there has been insufficient exploration to define any mineral resource and it is uncertain if further exploration will result in the determination of any mineral resource. Any information, including quantities and/or grade, described in this MD&A should not be interpreted as assurances of a potential resource or reserve, or of potential future mine life or of the viability or profitability of future operations.

Few properties that are explored are ultimately developed into producing mines. Substantial expenditures are required to establish ore reserves through drilling, to develop metallurgical processes to extract the metal from the ore and, in the case of new properties, to develop the mining and processing facilities and infrastructure at any site chosen for mining.

The economics of exploring and developing mineral properties is affected by many factors including the cost of operations, variations in the grade of ore mined, fluctuations in metal markets, costs of mining and processing equipment and such other factors as government regulations, including regulations relating to royalties, allowable production, importing and exporting of minerals and environmental protection. Major expenses may be required to establish reserves by drilling and to construct mining and processing facilities at a particular site. It is impossible to ensure that the current planned exploration and development programs of Palamina will result in economically viable or profitable commercial mining operations. The profitability of Palamina’s operations will be, in part, directly related to the costs and success of its exploration and development programs, which may be affected by a number of factors. Substantial expenditures are required to establish mineral reserves that are sufficient to support commercial mining operations and to construct, complete and install mining and processing facilities on those properties that are actually developed.

No assurance can be given that any particular level of recovery of minerals will be realized or that any potential quantities and/or grade will ever qualify as a resource, or that any such mineral resource will ever qualify as a commercially viable (or mineable) deposit which can be legally and economically exploited. Where expenditures on a property have not led to the discovery of mineral reserves, incurred expenditures will generally not be recoverable.

Additional Capital

Palamina plans to focus on evaluating its properties and exploring for minerals and will use its working capital to carry out such activities. However, the exploration and development of Palamina’s exploration properties is expected to require substantial additional financing. The ability of Palamina to arrange such additional financing in the future will depend, in part, on the prevailing capital market conditions as well as the business and performance of Palamina. Failure to obtain additional financing could result in delaying or indefinite postponement of exploration, development or production on any or all of Palamina’s exploration properties or a loss of a property interest. There can be no assurance that additional capital or other types of financing will be available if needed or that, if available, the terms of such financing will be favourable to Palamina. If additional financing is raised by Palamina through the issuance of securities from treasury, control of Palamina may change and security holders may suffer potentially significant dilution.

Joint Ventures and Subsidiaries

Palamina may, in the future, operate some of its activities and properties through joint ventures, subsidiaries, options, earn-ins or similar arrangements in order to fully exploit the exploration and

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

production potential of its exploration assets. There can be no assurance that Palamina will be able to identify and successfully negotiate joint venture or similar arrangements with third parties on terms that are favourable to Palamina, or at all. Palamina may, in the future, be unable to meet its share of costs incurred under such arrangements and may have its property interests subject to such arrangements reduced as a result or even face termination of such arrangements.

Palamina is also subject to the typical risks associated with joint ventures and similar arrangements, including disagreement on how to develop, operate or finance the properties and activities and contractual and legal remedies of Palamina's partners in the event of such disagreements. In addition, any limitation on the transfer of cash or other assets between Palamina and such entities, or among such entities, could restrict Palamina's ability to fund its activities efficiently. Any such limitations or the perception that such limitations may exist now or in the future, could have an adverse impact on Palamina's business, plans, prospects, value and stock price.

No History of Operations

Palamina is an early-stage exploration and development company and has no history of mining or refining mineral products. As such, Palamina is subject to many risks common to such enterprises, including under-capitalization, cash shortages, limitations with respect to personnel, financial and other resources and lack of revenues. There is no assurance that Palamina will be successful in achieving a return on shareholders' investment and the likelihood of success must be considered in light of its early stage of operations.

No History of Earnings

Palamina has not yet commenced operations and therefore has no history of earnings or of a return on investment, and there is no assurance that certain of its property interests or other assets will be economically viable or will be advanced to generate earnings, operate profitably or provide a return on investment in the future. No operating revenues are anticipated until one of Palamina's projects comes into production, which may or may not occur. Palamina will continue to experience losses unless and until it can successfully develop and begin profitable commercial production at one of its mining properties. There can be no assurance that Palamina will be able to do so.

No History of Profitability

Palamina is an early exploration and development stage company with no history of revenues or profitability. There can be no assurance that the activities of Palamina will be economically viable or profitable in the future. Palamina will require additional financing to further explore, develop, acquire, and achieve commercial production on its property interests and, if financing is unavailable for any reason, Palamina may become unable to acquire and retain its property interests and carry out its business plan.

Market Price and Trading of Palamina's Shares

Securities of micro-cap and small-cap companies have experienced substantial volatility in the past, often based on factors unrelated to the financial performance or prospects of the companies involved. These factors include macroeconomic developments in North America and globally and market perceptions of the attractiveness of particular industries. The price of the Palamina Shares is also likely to be significantly affected by its financial condition and results.

As a result of any of these factors, the market price of the Palamina Shares at any given point in time may not accurately reflect Palamina's long-term value. Securities class action litigation often has been brought against companies following periods of volatility in the market price of their securities. Palamina may in

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

the future be the target of similar litigation. Securities litigation could result in substantial costs and damages and divert management's attention and resources.

Industry and Economic Factors Affecting Palamina

Palamina is a junior resource company focused primarily on the evaluation, exploration and development of mineral properties and potential acquisition of mineral properties in the future. Palamina's future performance is largely tied to the financial markets related to junior resource companies, which is often cyclical. Palamina will continuously monitor several economic factors including the uncertainty regarding the price of gold, silver and copper and the availability of equity financing for the purposes of mineral exploration and development. Palamina's future performance is largely tied to its ability to raise additional financing needed to fund its ongoing exploration and operating activities and to pursue the exploration and the development of its mineral property interests and the overall financial markets. Financial markets in the mining sector are likely to continue to be volatile reflecting ongoing concerns about the global economy, and the general pessimistic outlook in the mining sector. Companies worldwide have been affected negatively by these trends. As a result, Palamina may have difficulties raising equity financing needed for the purposes of mineral exploration and development, particularly without excessively diluting the interests of its current shareholders. With continued market volatility expected, Palamina's current strategy is to continue a modest exploration program on its properties using existing cash and funds generated through equity financings if and when available and to seek out other prospective business opportunities, including entering into option arrangements and/or joint ventures. Palamina believes that this focused strategy will enable it to pursue its business strategy and plans in the near term. These trends may limit Palamina's ability to develop and/or further explore its properties, and/or acquire other property interests that could be acquired in the future. Management will monitor economic conditions and estimate their impact on Palamina's plans, strategies and activities and incorporate these estimates in short-term operating and longer-term strategic decisions.

Reliance on a Limited Number of Properties

The only property interests of Palamina are its interests in the Mexico Properties and the Peru Properties. Except for the El Santuario property, none of the Mexico Properties or Peru Properties is currently a material property for purposes of NI 43-101. While Palamina may seek to acquire additional mineral properties that are consistent with its business objectives, there can be no assurance that Palamina will be able to identify suitable additional mineral properties or, if it does identify suitable properties, that it will have sufficient financial resources to acquire such properties or that such properties will be available on terms acceptable to Palamina or at all.

Commodity Prices

The price of Palamina's securities, its financial condition and results, and its access to the capital required to finance its exploration activities may in the future be adversely affected by declines in the price of precious and base metals and, in particular, the price of gold and silver. Base and precious metal prices fluctuate widely and are affected by numerous factors beyond Palamina's control such as the sale or purchase of base and precious metals by various dealers, central banks and financial institutions, interest rates, exchange rates, inflation or deflation, currency exchange fluctuation, global and regional supply and demand, production and consumption patterns, speculative activities, increased production due to improved mining and production methods, government regulations relating to prices, taxes, royalties, land tenure, land use, importing and exporting of minerals, environmental protection, and international political and economic trends, conditions and events. If these or other factors continue to adversely affect the price of base and precious metals, the market price of Palamina's securities may decline. A severe decline in the price of a mineral being explored or produced or expected to be explored or produced by

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

Palamina would have a material adverse effect on Palamina, and could result in the suspension of exploration or development of properties by Palamina.

Insurance and Uninsured Risks

Palamina's business is subject to a number of risks and hazards generally, including adverse environmental conditions, industrial accidents, labour disputes, unusual or unexpected geological conditions, ground or slope failures, cave-ins, changes in the regulatory environment, natural phenomena such as inclement weather conditions, floods and earthquakes. Such occurrences could result in damage to mineral properties, personal injury or death, environmental damage to Palamina's exploration properties or the properties of others, delays in the ability to undertake exploration, monetary losses and possible legal liability.

Palamina does not currently maintain insurance in respect of such risks. Although Palamina may in the future maintain insurance to protect against certain risks in such amounts as it considers to be reasonable, such insurance even if obtained will not cover all the potential risks associated with a mining company's operations. Palamina may also be unable to obtain and maintain insurance to cover these risks at economically feasible premiums. Insurance coverage may not continue to be available or may not be adequate to cover any resulting liability. Moreover, insurance against risks such as environmental pollution or other hazards as a result of exploration, development and production is not generally available to Palamina or to other companies in the resource industry on acceptable terms. Palamina might also become subject to liability for pollution or other hazards which it may not be insured against or which Palamina may elect not to insure against because of premium costs or other reasons. Losses from these events may cause Palamina to incur significant costs that could have a material adverse effect upon its business, plans, prospects, financial performance and condition and results. The payment of such liabilities could reduce or eliminate Palamina's available funds or could exceed the funds available to Palamina to pay such liabilities and result in bankruptcy.

Environmental Risks and Hazards

The mining and mineral processing industries are subject to extensive environmental regulation for the protection of the environment. These regulations mandate, among other things, the maintenance of air and water quality standards and land reclamation. They also set forth limitations on the generation, transportation, storage and disposal of solid and hazardous waste. These regulations may adversely affect Palamina or require it to expend significant funds. There is also a risk that environmental and other laws and regulations may become more onerous, making it more costly for Palamina to remain in compliance with such laws and regulations.

There is no assurance that future changes in environmental regulation, if any, will not adversely affect Palamina's operations. Environmental hazards may exist on the properties on which Palamina holds interests which are unknown to Palamina at present and which have been caused by previous or existing owners or operators of the properties or by current or previous surface rights owners.

Palamina cannot give any assurances that breaches of environmental laws (whether inadvertent or not) or environmental pollution will not materially and adversely affect its business, plans and financial condition. There is no assurance that any future changes to environmental regulation, if any, will not adversely affect Palamina.

Permitting

Palamina's current and anticipated future activities will require approvals and permits from various federal and local governmental authorities, and such operations are and will be governed by laws and

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

regulations governing prospecting, exploration, development, mining, production, taxes, labour standards, health, waste disposal, toxic substances, land use, environmental protection, mine safety and other matters. There is no assurance that delays will not occur in connection with obtaining all such necessary approvals and permits for the existing activities or additional approvals or permits for any possible future changes to operations. Prior to any development on any of its properties, Palamina must receive permits from appropriate governmental authorities. There can be no assurance that Palamina will obtain or continue to hold all permits necessary to develop or continue its activities at any particular property. Delays in obtaining or a failure to obtain any licenses or permits or extensions thereto, challenges to the issuance of such licenses or permits, whether successful or unsuccessful, changes to the terms of such licenses or permits or a failure to comply with the terms of any such licenses or permits that Palamina has obtained, could have a material adverse effect on Palamina by delaying or preventing or making more expensive exploration and/or development.

Title to Mining Concessions

The acquisition of the right to explore and/or exploit mineral properties is a detailed and time-consuming process. Although Palamina has either obtained title opinions or reviewed title for its properties, there is no guarantee that title to such property interests will not be challenged or impugned. Palamina's mineral properties may be subject to prior registered or unregistered liens, agreements, transfers or claims, and title may be affected by, among other things, undetected defects and land claims. A successful challenge to the validity of, or the precise area and location of, these claims could result in Palamina being unable to operate on its properties as permitted or being unable to enforce its rights with respect to its properties.

Further, in order to maintain the mining concessions, Palamina must incur certain minimum exploration expenditures annually or risk forfeiture of the mining concessions and any such expenditure made to such time. In light of Palamina's cash resources anticipated following the completion of the Arrangement, and in the absence of Palamina obtaining additional sources of funding, it is possible that Palamina may not be able to continue to commit the required minimum exploration expenditures required for its properties beyond the near-term.

Infrastructure

Development and exploration activities depend, to one degree or another, on adequate infrastructure. Reliable roads, bridges, power sources and water supply are important determinants, which affect capital and operating costs. Unusual or infrequent weather phenomena, sabotage, and government or other interference in the maintenance or provision of such infrastructure could adversely affect Palamina's business, plans, prospects, financial condition and results.

Competition

The resource and mining exploration industry is intensely competitive in all of its phases. As a result of this competition, some of which is with significantly larger, established mining companies with substantial capabilities and greater financial and technical resources than Palamina, Palamina may be unable to continue to explore and develop its existing properties, or to acquire additional mineral properties in the future. Palamina may also encounter increasing competition from other resource and mining companies, many of which are significantly larger with significantly greater resources, in its efforts to hire experienced mining professionals.

Government Regulation

The mineral exploration activities (as well as the potential for eventual mining, processing and development activities) of Palamina will be subject to extensive laws and regulations governing prospecting, exploration, development, production, taxes, labour standards and occupational health, mine

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

safety, toxic substances, land use, waste disposal, water use, land claims of local people, protection of historic and archaeological sites, mine development, protection of endangered and protected species and other matters.

Government approvals, approval of the local population and permits are currently, and may in the future be required in connection with Palamina's proposed activities. To the extent such approvals are required and not obtained, Palamina may be curtailed or prohibited from continuing its exploration or development activities or from proceeding with planned exploration or development of mineral properties. Failure to comply with applicable laws, regulations and permitting requirements may result in enforcement actions thereunder, including orders issued by regulatory or judicial authorities causing activities to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment, or remedial actions. Parties engaged in the exploration or development of mineral properties or mining operations may be required to compensate those suffering loss or damage by reason of their activities and may have civil or criminal fines or penalties imposed for violations of applicable laws. Regulators in Mexico and Peru have broad authority to shut down and/or levy fines against facilities that do not comply with regulations or standards.

Palamina's mineral exploration and development activities may be adversely affected in varying degrees by changing government regulations relating to the mining industry or shifts in political conditions that increase royalties payable or the costs related to Palamina's activities or maintaining its properties. Operations may also be affected in varying degrees by government regulations with respect to restrictions on exploration, development, production, price controls, government imposed royalties, claim fees, export controls, income taxes, and expropriation of property, environmental legislation and mine safety. The effect of these factors cannot be accurately predicted. Although Palamina's exploration and development activities are expected to be carried out in accordance with all applicable rules and regulations, no assurance can be given that new rules and regulations will not be enacted or that existing rules and regulations will not be applied in a manner which could limit or curtail exploration or development.

Furthermore, any shift in political attitudes, or amendments to current laws and regulations governing activities of exploration, development, mining or milling or more stringent implementation thereof are beyond the control of Palamina and could have a substantial adverse impact on Palamina.

Foreign Operations

All of the Palamina's exploration properties are located in Mexico and Peru, and are subject to those jurisdiction's laws. As such, Palamina's activities will be and may increasingly be exposed to various levels of political, economic and other risks and uncertainties. Palamina believes the present attitude of Mexico and Peru to foreign investment and resource exploration to be favourable, but investors should assess the political risks of investing in a foreign country. These risks and uncertainties vary from country to country and include, but are not limited to: terrorism; hostage taking; military repression; fluctuations in currency exchange rates; high rates of inflation; labour unrest; the risks of war or civil unrest; expropriation and nationalization; renegotiation or nullification of existing concessions, licenses, permits and contracts; illegal mining; changes in taxation policies; and changing political conditions and governmental regulations, including changing environmental legislation.

Mexico and Peru are working to develop greater political and economic stability. However, Mexico and Peru continue to experience heightened levels of political and economic instability due to regional geopolitical instability. These conditions may be exacerbated by current global economic conditions. This instability may cause changes to existing governmental regulations affecting mineral exploration and mining activities, and exposes Palamina to various risks associated with emerging markets, and/or may

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

have a material adverse effect on Palamina's plans, properties, business, financial condition and results. While Palamina intends to implement various controls relative to its operations, including controls ensuring compliance with the *Corruption of Foreign Public Officials Act*, there is no assurance that such controls will eliminate such risks. These controls in conjunction with future periodic site visits are anticipated to provide management with the necessary internal controls relative to the operations in Mexico and Peru. Palamina will also monitor the business and regulatory environment of Mexico and Peru in order to minimize the potential impact on costs and operations.

Variations from the current regulatory, economic and political climate could have an adverse effect on the affairs of Palamina. Changes, if any, in resource exploration or investment policies or shifts in political attitudes in Mexico and/or Peru may adversely affect its activities or viability. Activities may be affected in varying degrees by government regulations with respect to, but not limited to, restrictions on operations, income taxes, expropriation of property, maintenance of claims, environmental legislation, land use, land claims of local people, water use and mine safety. Failure to comply strictly with applicable laws and local practices relating to mineral right applications and tenure could result in loss, reduction or expropriation of entitlements, or the imposition of additional local or foreign parties as joint venture partners with carried or other interests. The occurrence of these various factors and uncertainties cannot be accurately predicted and could have an adverse effect on the plans, properties, business, financial condition or results of Palamina.

In addition, in the event of a dispute arising from foreign operations, Palamina may be subject to the exclusive jurisdiction of foreign courts or may not be successful in subjecting foreign persons to the jurisdiction of courts in Canada. It is not possible for Palamina to accurately predict such developments or changes in laws or the extent to which any such developments or changes may have a material adverse effect on Palamina's business.

Influence of Third Party Stakeholders

Some of the lands in which Palamina holds an interest, or the exploration equipment and roads or other means of access which Palamina intends to utilize in carrying out its work programs or general business activities, may be subject to interests or claims by third party individuals, groups or companies. In the event that such third parties assert any claims or do not consent to Palamina carrying on activities on lands subject to their interests or claims, Palamina's work programs may be delayed or prevented, even if such claims are not meritorious. Such claims or delays may result in significant financial loss and loss of opportunity for Palamina.

Palamina may need to enter into negotiations with landowners and other groups in local communities in Mexico and/or Peru in order to conduct further exploration and development work on its properties. There is no assurance that future discussions and negotiations will result in agreements with landowners and other local community groups in Mexico and/or Peru or if such agreements will be on terms acceptable to Palamina so that Palamina may continue to conduct exploration and development activities on these properties.

Share Price Fluctuations

In recent years, securities markets have experienced a high level of price and volume volatility. The securities of many companies, particularly those considered exploration-stage companies such as Palamina, have experienced wide fluctuations in market prices which have not necessarily been related to the operating performance, underlying asset values or prospects of such companies. There can be no assurance that the price of the Palamina Shares will be unaffected by any such volatility. The market price

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

of the shares of mineral resource companies is also significantly affected by short-term changes in commodity prices, precious and base metal prices or other mineral prices.

Acquisitions and Integration

From time to time, Palamina may examine opportunities to acquire additional exploration and/or mining assets and businesses. Any acquisition that Palamina may choose to complete may be of a significant size relative to the size of Palamina, may change the nature or scale of Palamina's business and activities, and may expose Palamina to new geographic, political, operating, financial and geological risks. Palamina's success in its acquisition activities, if any, depends upon its ability to obtain additional sources of financing, identify suitable acquisition candidates, negotiate acceptable terms for any such acquisition, and integrate any acquired operations successfully with those of Palamina. Any acquisitions would be accompanied by risks. In the event that Palamina chooses to raise debt capital to finance any such acquisitions, Palamina's leverage will be increased. If Palamina chooses to use equity as consideration for such acquisitions, existing shareholders may suffer significant dilution. There can be no assurance that Palamina would be successful in obtaining additional sources of financing or in overcoming these risks or any other problems encountered in connection with such acquisitions.

Management of Growth

Palamina may be subject to growth-related risks including capacity constraints and pressure on its internal systems and controls. The ability of Palamina to manage growth effectively will require it to continue to implement and improve its operations and financial systems and to expand, train and manage its employee base. The inability of Palamina to deal with this growth could have a material adverse impact on its business, plans, operations and prospects.

Dilution

Financing the development of a mineral property through to production, should feasibility studies show it is recommended, would be expensive and Palamina would require additional monies to fund development and exploration programs and potential acquisitions. Palamina cannot predict the size of future issuances of Palamina Common Shares or the issuance of debt instruments or other securities convertible into Palamina Common Shares. Likewise, Palamina cannot predict the effect, if any, that future issuances and sales of Palamina's securities will have on the market and market price of the Palamina Shares. If Palamina raises additional funds by issuing additional equity securities, such financing may substantially dilute the interests of existing shareholders. Sales of substantial numbers of Palamina securities, or the availability of such Palamina securities for sale, could adversely affect the market, liquidity and any prevailing market prices for Palamina's securities.

Dividend Policy

No dividends on the Palamina Common Shares have been paid by Palamina to date. Payment of any future dividends will be at the discretion of Palamina's board of directors after taking into account many factors, including Palamina's operating results, financial condition and current and anticipated cash needs. At this time, Palamina has no source of cash flow and anticipates using all available cash resources towards its stated business objectives and retaining all earnings, if any, to finance its business activities.

Key Personnel

Palamina's development will be dependent on the efforts of key management and potentially other key personnel. Locating mineral deposits depends on a number of factors, not the least of which is the technical skill of the exploration personnel involved. The loss of any of these people, particularly to competitors, could have a material adverse effect on Palamina's business. Further, with respect to the future development of Palamina's exploration properties, it may become necessary to attract both

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

international and local personnel for such development. The marketplace for key skilled personnel is highly competitive, which means the cost of hiring, training and retaining such personnel may increase. Factors outside Palamina's control, including competition for human capital and the high level of technical expertise and experience required to execute this development, will affect Palamina's ability to identify and retain the specific personnel required.

Due to the relatively small size of Palamina, the loss of key personnel or Palamina's inability to attract and retain additional highly skilled employees or consultants may adversely affect its business, activities and future plans. Palamina does anticipate carrying any "key person" life insurance in respect of any of its directors, officers or other employees.

Risk of Litigation

Palamina may become involved in disputes with other parties in the future which may result in litigation or other legal proceedings. The results of legal proceedings cannot be predicted with certainty. If Palamina is unable to resolve these disputes favourably, it may have a material adverse impact on the ability of Palamina to carry out its business plan.

Internal Controls

Internal controls over financial reporting are procedures designed to provide reasonable assurance that transactions are properly authorized, assets are safeguarded against unauthorized or improper use, and transactions are properly recorded and reported. A control system, no matter how well designed and operated, can provide only reasonable, and not absolute, assurance with respect to the reliability of financial reporting and financial statement preparation.

Conflicts of Interest

Certain of the directors and officers of Palamina also serve as directors and/or officers of other companies involved in natural resource exploration and development and consequently there exists the possibility for such directors and officers to be in a position of conflict. Any decision made by any of such directors and officers involving Palamina will be made in accordance with their duties and obligations to deal fairly and in good faith with a view to the best interests of Palamina and its shareholders. In addition, each of the directors is required to declare and refrain from voting on any matter in which such directors may have a conflict of interest in accordance with the procedures set forth in the OBCA and other applicable laws.

DISCLOSURE AND INTERNAL CONTROLS

Management has established processes, which are in place to provide them sufficient knowledge to support management representations that they have exercised reasonable diligence that (i) the financial statements do not contain any untrue statement of material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it is made, as of the date of and for the periods presented by the financial statements and (ii) the financial statements fairly present in all material respects the financial condition, results of operations and cash flows of the Company, as of the date of and for the periods presented by the financial statements.

In contrast to the certificate required under National Instrument 52-109 Certification of Disclosure in Issuers' Annual and Interim Filings (Form 52-109FV2), the Company utilizes the Venture Issuer Basic Certificate which does not include representations relating to the establishment and maintenance of disclosure controls and procedures (DC&P) and internal control over financial reporting (ICFR), as defined in NI 52-109. In particular, the certifying officers filing the Certificate are not making any representations relating to the establishment and maintenance of:

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

- (i) controls and other procedures designed to provide reasonable assurance that information required to be disclosed by the issuer in its annual filings, interim filings or other reports filed or submitted under securities legislation is recorded, processed, summarized and reported within the time periods specified in securities legislation; and
- (ii) a process to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer's IFRS.

The Company's certifying officers are responsible for ensuring that processes are in place to provide them with sufficient knowledge to support the representations they are making in this certificate.

Investors should be aware that inherent limitations on the ability of certifying officers of a venture issuer to design and implement on a cost effective basis DC&P and ICFR as defined in NI 52-109 may result in additional risks to the quality, reliability, transparency and timeliness of interim and annual filings and other reports provided under securities legislation.

The Corporation's Chief Executive Officer ("CEO") and Chief Financial Officer ("CFO") are responsible for the design and effectiveness of disclosure controls and procedures ("DC&P") and the design of international control over financial reporting ("ICFR") to provide reasonable assurance that material information related to the Corporation is made known to the Corporation's certifying officers. The Corporation's controls are based on the Committee of Sponsoring Organizations ("COSO") 2013 framework. The Corporation's CEO and the CFO have evaluated the design and effectiveness of the Corporation's DC&P as of September 30, 2018 and have concluded that these controls and procedures are effective in providing reasonable assurance that material information relating to the Corporation is made known to them by others within the Corporation. The CEO and CFO have also evaluated the design and effectiveness of the Corporation's ICFR as of September 30, 2018 and concluded that these controls and procedures are effective in providing reasonable assurance that financial information is recorded, processed, summarized and reported in a timely manner.

During the current period there have been no changes in the Corporation's DC&P or ICFR that materially affected, or are reasonably likely to materially affect, the Corporation's internal control over financial reporting.

Cautionary Note Regarding Forward-Looking Information

Except for statements of historical fact relating to Palamina, certain information contained in this MD&A constitutes "forward-looking information" under Canadian securities legislation. Forward-looking information includes, but is not limited to, statements with respect to the potential of the Company's properties; the future price of precious and/or base metals; success of exploration activities; cost and timing of future exploration and development; requirements for additional capital and other statements relating to the financial and business prospects of the Company. Generally, forward-looking information can be identified by the use of forward-looking terminology such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates" or "does not anticipate", or "believes", or variations of such words and phrases or statements that certain actions, events or results "may", "could", "would", "might" or "will be taken", "occur" or "be achieved". Forward-looking information is based on the reasonable assumptions, estimates, analysis and opinions of management made in light of its experience and its perception of trends, current conditions and expected developments, as well as other factors that management believes to be relevant and reasonable in the circumstances at the date that such statements are made, and are inherently subject to known and unknown risks, uncertainties and other factors that may cause the actual results, level of activity,

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

performance or achievements of the Company to be materially different from those expressed or implied by such forward-looking information, including but not limited to risks related to: unexpected events and delays during permitting; the possibility that future exploration results will not be consistent with the Company's expectations; timing and availability of external financing on acceptable terms and in light of the current decline in global liquidity and credit availability; the uncertainty of conducting activities within a joint venture structure; currency exchange rates; government regulation of mining operations; failure of equipment or processes to operate as anticipated; risks inherent in mineral exploration and development including environmental hazards, industrial accidents, unusual or unexpected geological formations; and uncertain political and economic environments. Although management of Palamina has attempted to identify important factors that could cause actual results to differ materially from those contained in forward-looking information, there may be other factors that cause results not to be as anticipated, estimated or intended. There can be no assurance that such statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking information. The Company does not undertake to update any forward-looking information, except in accordance with applicable securities laws.

Caution Regarding Adjacent or Similar Mineral Properties

This MD&A contains information with respect to adjacent or similar mineral properties in respect of which the Company has no interest or rights to explore or mine. The Company advises US investors that the mining guidelines of the US Securities and Exchange Commission (the "SEC") set forth in the SEC's Industry Guide 7 ("SEC Industry Guide 7") strictly prohibit information of this type in documents filed with the SEC. **Readers are cautioned that the Company has no interest in or right to acquire any interest in any such properties, and that mineral deposits on adjacent or similar properties, and any production therefore or economics with respect thereto, are not indicative of mineral deposits on the Company's properties or the potential production from, or cost or economics of, any future mining of any of the Company's mineral properties.**

Management's Responsibility for Financial Information

The unaudited interim consolidated financial statements have been prepared by management, on behalf of the Board of Directors, in accordance with the accounting policies disclosed in the notes to the unaudited interim consolidated financial statements. Where necessary, management has made informed judgments and estimates in accounting for transactions which were not complete at the statement of financial position date. In the opinion of management, the interim consolidated financial statements have been prepared within acceptable limits of materiality and are in accordance with International Accounting Standard 34 Interim Financial Reporting of International Financial Reporting Standards using accounting policies consistent with International Financial Reporting Standards appropriate in the circumstances.

Management has established systems of internal control over the financial reporting process, which are designed to provide reasonable assurance that relevant and reliable financial information is produced.

The Board of Directors is responsible for reviewing and approving the unaudited interim consolidated financial statements together with other financial information of the Company and for ensuring that management fulfills its financial reporting responsibilities. An Audit Committee assists the Board of Directors in fulfilling this responsibility. The Audit Committee meets with management to review the financial reporting process and the unaudited interim consolidated financial statements together with other financial information of the Company. The Audit Committee reports its findings to the Board of Directors for its consideration in approving the unaudited interim consolidated financial statements together with other financial information of the Company for issuance to the shareholders.

Palamina Corp.

Management Discussion & Analysis Nine Month Period Ended September 30, 2018

Management recognizes its responsibility for conducting the Company's affairs in compliance with established financial standards, and applicable laws and regulations, and for maintaining proper standards of conduct for its activities.

External auditors, appointed by the shareholders, have not audited or reviewed the unaudited interim consolidated financial statements for the nine month period ended September 30, 2018, and did not perform the tests deemed necessary to enable them to express an opinion on these unaudited interim consolidated financial statements.
